T : Subject:

10/090, 035

(ST.C)

Please search the following:

DNA encoding SEQ ID NO:2 or 4.
 SEQ ID NO:1-4.
 oligo of SEQ ID NO:1 and 3

Please search both commercial and patent databases, including pending. Thanks

Medina A. Ibrahim Patent Examiner GAU:1638 CM1-9E03 mailbox-9E12 (703)306-5822

Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets of results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, .rapm and .rapn

The Pending database search results should not be left in the case because they contain data that is confidential.

Voluntary Results Feedback Form	
> I am an examiner in Workgroup: Example: 1610	
> Relevant prior art found, search results used as follows:	
102 rejection	
103 rejection	
Cited as being of interest.	
Helped examiner better understand the invention.	
Helped examiner better understand the state of the art in their technology.	
Types of relevant prior art found:	
☐ Foreign Patent(s)	
<ul> <li>Non-Patent Literature         <ul> <li>(journal articles, conference proceedings, new product announcements etc.)</li> </ul> </li> </ul>	
> Relevant prior art <b>not found:</b>	
Results verified the lack of relevant prior art (helped determine patentability).	
Results were not useful in determining patentability or understanding the invention.	
Comments:

On May 15, 7002 this sequence version replaced gi:18181981.

On May 15, 7004 this sequence version replaced gi:18181981.

On May 15, 7002 this sequence version replaced gi:18181981.

On May 15, 7002 this sequence version replaced gi:18181981.

On May 15, 7004 this sequence version as searched against (ctp://ncbi.nlm.dh.gov/blast/db) and the cDNA sequence database at (ftp://ncbi.nlm.dh.gov/blast/db) and the cDNA sequence database at Kgp. Protein homologies of the coding regions were searched against Kgp. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTN 2.0 with the corresponding DBJA accession no. and RGP clone ID.

A gene with identity or significant homology to aprotein is classified based on the protein name to indicate the homology (covering such as same name, 'putative' and 'like protein'. A gene preddicted with a gene preddiction of the sequence is from try the sequence of Pd456E05 clone has an overlap with P0470Al2 (DDBJ: This sequence of Pd456E05 clone has an overlap with postiled annotation of this entry is available at his minotation of this entry is available at hitp://rgp.dna.affrc.go.jp/GenomeSeq.html.

It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /organism="Oryza sativa (japonica cultivar-group)"

On Oct 17, 2001 this sequence version replaced gi:13430001.

Genes were predicted from the integrated results of the following:
Genes were predicted from the integrated results of the following:
GRNSCANI.0, BLASTNI.0, BLASTNI.0, BLASTNI.0, BLASTNI.0, BLASTNI.0, BLASTNI.0, BLASTNI.0, DIAGEDIA GATABASE, II

(ACT.)/Arcbi.nlm.in.gov/blastydb) and the cDNA sequence database at KRSP. Protein homologies of the coding regions were searched against KRSP. Protein homologies of the coding regions were searched against KRSP. Protein homologies of the coding regions were searched against the identified cDNA sequences using BLASTNI.0, With the corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology (covering such as same name, 'putative-' and 'like protein.' A gene without significant homology to any protein with the protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from SP6 to 77 of the PAC clone. The orientation of the sequence is from SP6 to 77 of the PAC clone. The corientation of the sequence is from SP6 to 77 of the PAC clone. The orientation of the sequence is from SP6 to 77 of the PAC clone. The corientation of the sequence is from SP6 to 77 of the PAC clone. The corientation of the sequence as a static of packal and assembly quality together with humology to specificate and sequence is from SP6 to 77 of the PAC clone. The protein and saffic 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Oryza sativa (japonica cultivar-group) genomic DNA, chromosome 1, PAC clone:P0470A12.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 4 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* are represented as runs of N. The order of the pieces

* are represented as runs of N. The order of the pieces

* are represented as runs of N. The order of the pieces

* are represented as runs of N. The order of the pieces

* the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

11216 11315: contig of 11215 bp in length

* 11316 93352: contig of luknown length

* 11316 11315: gap of unknown length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           60 GlyHisGlyPheValValArgGluThrArgValGluGluAspIleAsnThrCysThrCly 79

Arabidopsis thaliana.

ISM Arabidopsis thaliana.

Enkaryota: Viridiplantee; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta: Magnollophyta; eudicotyledons; core eudicots; Rosidae; eurosida II; Brassicales; Brassicaceae; Arabidopsis.

E of Asses I to 189780)

E of Arabidopsis sequencing, project.

Direct Submission

AL Submitted (10-MAR-2000) MIPS, at the Max-Planck-Institut fuer Blochemic, Am Klopferspitz 18a, D-82152 Martinsried, E-mail: lemcke@mips.blochem.mpg.de.mayer@mips.blochem.mpg.de.project Coordinator: Mike Bewan, Molecular Genetics Department, Cambridge Laboratory, John Innes Centre, Colney Lane, NR4 7UJ Norwich, UK, Information on performance of analysis and a more detailed annotation of this entry and other sequences of chromosomes 3, and 5 can be viewed at: http://www.mips.blochem.mpg.de/proj/thal/this fragment has an overlap with ArCHRIV85 at the 5' end and an Overlap with ArCHRIV87 at the 3' end.

ECORI; Site_2: XhoI; ds-CDNA molecules were generated as
follows. First-strand cDNA was prepared from oligo-dr
selected mRNA by priming with an XhoI oligo-dr primer. The
resulting DNA:RNA hybrid was treated with RNASE H and used
as a template for DNA PolI-catalyzed second strand
synthesis. After the addition of EcoRI adaptors, the
ds-CDNAS were digested with XhoI and size-selected. The
resulting molecules were directionally cloned into the
ECORI and XhoI sites of the HybriZAP lambda vector
(Stratagene) and excised as pAD-GAL4 phagemids."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                    US-10-090-035-2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3, P
